

5716 E-Drum Firmware

Signal Processing Synoptic

"EQ2" = 2-Bands EQ, "EQ4" = 4-Bands EQ, "C/L" = Compressor / Limiter

MXF Blocks

Following is the Multi-Effect configuration of one MFX block, 4 of them are available:

These effect blocks can be used either by E-Drum instrument channels, or by GM channels for Song playback.

Single Effects or combinations of only some of these Effects are possible by switching OFF the other effects in the signal processing path, for example:

- Compressor + EQ (for special equalizing and dynamic processing of some Drum instruments)
- Distortion + EQ + Short Delay (for use as a Guitar-Multi-Effect)
- Overdrive + EQ + Rotary (for use as a Organ-Multi-Effect)
- etc.

A big number of Effect parameters allow tweaking each single Effect for different types/characters.

The MFX blocks can be used in mono (single MFX) or stereo mode (2 MFX blocks).

Chan# is the internally used channel for drum sound play. Externally (on MIDI_IN) all these drums sounds are triggered through MIDI channel 10.

Note# 1 till 9 are used to trigger the metronome click sounds (0x01 = "one", 0x02 = "two" etc.).

Other notes on MIDI channel 10 are triggering sounds of the standard GM Percussion sound set. MIDI channels 1-9 and 11-16 can be used for demo/accompaniment song playback (Bass and other tonal instrument tracks, GM compatible).

Drum Kit Edit

Following is the list of available Edit Controls for the Pads/Triggers mentioned in the table above:

Notes:

* Pad Mixer and Extra Settings controls are done on internal drum channels (groups of trigger notes, see page 1)

** Edit controls of all Hi-Hat trigger notes are working on same parameter set

*** Soundbank drumset PC#100 is collection of all Kick instruments starting from key 1, PC#101 is collection of all Snare instruments etc. All Hihats drumset (PC#105) should be organized in HH groups as follows:

key#1 is Open HH, key#2 is Half-Open HH, key#3 is Near-Closed HH, key#4 is Closed HH,

key#5 is Open HH Edge, key#6 is Half-Open HH Edge, key#7 is Near-Closed HH Edge, key#8 is Closed HH Edge,

key#9 is HH Pedal Chick, key#10 is HH Pedal Splash, key#11..20 is group next HH sound etc.

Drum-Set (Kit) General Volume, Reverb/Ambience and Equalizer Settings

See "Special NRPN Controls" on page 5

Drum Kit select

All parameters of a Drum Kit will be stored in the Host CPU memory. Upon selection a Drum Kit these parameters will be sent to the 5716 board in a bulk on serial or parallel port. For efficient data transfer be aware that the firmware supports MIDI running status, and is storing NRPN MSB/LSB values.

Realtime control

HiHat pedal

The 5716EDrum accepts MIDI Control 4 message (Foot Controller) to receive the actual position of the Hihat controller pedal. Depending on the Hihat controller value, the triggered sound will not be the same:

Foot Controller value 0 to 11: Note On 46 will play the Open-Hihat sound

Foot Controller value 12 to 31: Note On 46 will play the Half-Open Hihat sound (sizzle)

Foot Controller value 32 to 64: Note On 46 will play the "Near-Closed" Hihat sound (sizzle)

Foot Controller value 65 to 127: Note On 46 will play the Close Hihat sound

The Host CPU doing the Trigger detection and HH-Pedal should send a HH "Chick" Note On (42) message upon crossing a defined threshold (e.g. value 64). The velocity should be calculated using the speed of pedal action. When "hitting" the Hihat controller pedal (pressing and releasing very quickly), a HH "Splash" Note On (21) message should be sent.

Cymbal choke

For Ride cymbal choke, a Key-Aftertouch message with value 127 should send to Ride-Edge note (59):

AnH 3Bh 7Fh

"n" is the MIDI channel, default n=9 (MIDI channel 10)

All Ride cymbal sounds will be muted (51,53,59).

For Crash cymbal choke, a Key-Aftertouch message with value 127 should send to Crash-Edge note (55).

For Crash2 cymbal choke, a Key-Aftertouch message with value 127 should send to Crash2-Edge note (52).

NB: note played while cymbal edge is pressed are played normally (not choked)!

Special NRPN Controls

NRPN sending method: CTRL#99=high byte, CTRL#98=low byte, CTRL#6=vv

Example:

In order to set General Synth Master Volume (NRPN 3707h) to value 64 (40h), send

- CTRL#99=55 (37h) (MIDI code: Bnh 63h 37h)
- CTRL#98=07 (07h) (MIDI code: Bnh 62h 07h)
- CTRL#6 =64 (40h) (MIDI code: Bnh 06h 40h), with "n" is the MIDI channel (default 9)

Insert Effect Presets

Some presets have been predefined for each of the 5 Insert Effects blocks: Compressor, Wah-Wah, Distortion, Mod-FX (Chorus etc) and Delay. Presets are selected through MIDI NRPN messages.

Compressor/Limiter Presets

Preset is selected by using MIDI NRPN 3x40h, with value = preset number, from 0 to 8

Nb	Name	Preset Default values

8	LIMITER 3: -18dB	64	0	73	127	0

Notes:

Preset value for Compressor Knee value is always 0 (Hard Knee).

Wah-Wah Presets

Preset is selected by using MIDI NRPN 3x50h, with value = preset number, from 0 to 7

Nb	Name	Preset Default values			
		Filter Type	Frequency	Resonance	Auto-Wah Sens
0	Off	0	127	0	0
1	Auto-Wah 1	0	67	107	127

3	Auto-Wah 3	1	70	100	100
4	Wah-Wah 1	0	127	80	0
5	Wah-Wah 2	1	64	80	0

Note:

If Auto-Wah is set ON (Auto-Wah sensitivity > 0), the Wah-Wah Filter Frequency (= Wah-Wah Pedal Position) will be modulated by the current value of the channel level detect. The parameters for setting up the level detector (attack and release) are taken from Compressor settings.

Distortion Presets

Preset is selected by using MIDI NRPN 3x60h, with value = preset number, from 0 to 13

Note : Preset value for Hi-Cut Filter Q is always 0.

Auto-Test

Built-in auto-test program is included which can be used for board production testing. To start the Auto-Test, send NRPN 3751H with value 23H. Sine waveforms at different frequencies will be output to the DAC to indicate test in progress, as follows:

Test in progress	Output frequency
Internal RAM & ROM	1500 Hz
External RAM & FLASH	1125 Hz
PASS	750 Hz

Last sine waveform is output constantly to allow test of audio output. Board must be reset to exit test mode and return in normal mode.

- Notes :**
1. NRPN sending method : CTRL#99=high byte, CTRL#98=low byte, CTRL#6=vv. Example : NRPN 0108h = 40h -> CTRL#99=1, CTRL#98=8, CTRL#6=64.
 2. x or xx means « don't care »
 3. Cross system exclusive :
Address can be 040h xxh xxh or 050h xxh xxh
If adresse=040h xxh xxh : system exclusive applies to midi port 1 (midi channels 0-Fh) if received on midi port1 , applies to midi port 2 (midi channels 10-1Fh) if received on midi port 2.
If adresse=050h xxh xxh, cross system exclusive : applies to port 2 if received on port1, applies to port 1 if received on port2
 4. Non cross system exclusive applying only on receiving port :
System exclusive applies to midi port 1 (midi channels 0-Fh) if received on midi port1.
System exclusive applied to midi port 2 (midi channels 10-1Fh) if received on midi port2.
 5. Non cross system exclusive applying on both ports :
System exclusive will be applied to all midi channels (0-1Fh). Can be received on port 1 or port 2 indifferently.
This is the case for all system exclusive concerning reverb and chorus because reverb and chorus are the same for both ports 1 and 2.
 6. Drumset edit NRPN : 4 different drumset edit tables are implemented :
 - 1 for midi port 1 channel 10
 - 1 for midi port 2 channel 10
 - 1 for midi port 1 channels 1-9 or 11-16 : for all these channels, edit table is the same
 - 1 for midi port 2 channels 1-9 or 11-16 : for all these channels, edit table is the same
